Speak to an associate about the Petco library of books on button quails.

Speak to an associate about our many private brand items available for the care and happiness of your pet.

Because all button quail are potential carriers of infectious diseases, such as Chlamydiosis, always wash your hands before and after handling your button quail and/or habitat contents to help prevent the potential spread of diseases. Work with your avian veterinarian on protocols to treat your bird should the bird contract Chlamydiosis.

Pregnant women, children under the age of 5 and people with weakened immune systems should contact their physician before purchasing and/or caring for a button quail and should consider not having a button quail as a pet. For more information regarding button quails and disease, go to the Center for Disease Control at cdc.gov/healthypets/ and petco.com/caresheet.

This care sheet can cover the care needs of other species. See petco.com for more information.
care sheet
button quail
coturnix chinensis

Developed with and approved by a qualified veterinarian.

red flags

- beak swelling or accumulations
- fluffed, plucked, or soiled feathers
- sitting on floor of habitat
- wheezing or coughing
- runny or discolored stools
- favoring one foot
- eye or nasal discharge
- red or swollen eyes
- loss of appetite

If you notice any of these signs, please contact your exotic animal veterinarian.

Developed with and approved by a qualified veterinarian.

diet

A well-balanced button quail diet consists of:
- High-quality, fresh, game bird diet or equivalent should make up 60-70% of diet, fresh vegetables and fruits; grit should also be offered in a shallow bowl large enough for the bird to sit in.
- Clean, fresh, filtered, chlorine-free water, changed daily.
- Do not feed birds avocado, fruit seeds, chocolate, caffeine or alcohol as these can cause serious medical conditions. Avoid sugar and high fat treats.

housing

- Button quails acclimate well to average household temperatures, not to exceed 80°F; be cautious of extreme temperature changes. The habitat should be placed off the floor in an area that is well-lit and away from drafts.
- The habitat should be rectangular and at least 8 cubic feet, with solid flooring. It is best to provide the largest habitat possible. A flight habitat is strongly recommended.
- Provide several hiding places.
- Habitat top should be fabric or soft material to prevent injury when the button quail jumps.
- Female button quails may be kept together with a single male; do not house males together. Different types of birds should not be housed together.
- Button quails should be socialized daily by the pet parent or kept in pairs to bond with each other.

normal behavior

- A male button quail kept without females may crow constantly.
- Male button quail are territorial and generally should not be kept together.
- Communicate with a variety of relatively quiet sounds, including crowing, clicking, and chirps.
- Provide foraging toys, which provide important mental stimulation.

habitat maintenance

- Clean and disinfect the habitat regularly; replace substrate or habitat liner weekly or more often as needed.
- Replace dishes and toys when worn or damaged; rotate new toys into the habitat regularly.
- Ensure that there are no habitat parts or toys with lead, zinc or lead-based paints or galvanized parts as these can cause serious medical issues if ingested by your bird.
- Do not use a lot of cleaning agents around your bird as the fumes can be harmful. It is recommended to use a natural cleaning product.

feeding

Things to remember when feeding your button quail:
- Fresh food and water should always be available.
- Vegetables and fruits not eaten within a few hours should be discarded.
- Ensure water and food containers are placed one to two inches above the habitat floor to prevent contamination by bedding or feces.
- Remember, treats should not exceed 10% of total food intake.

signs of a healthy animal

- Active, alert, and sociable
- Eats and drinks throughout the day
- Dry nares and bright, dry eyes
- Beak, legs and feet normal in appearance
- Clean, dry vent
- Smooth, well-groomed feathers

canary

serinus canarius domesticus

Canaries are well known for their beauty and varied colors. Male canaries are loved for their sweet singing. Canaries do well when kept singly or in pairs. Includes yellow canaries and red-factor canaries.

canary facts:

average adult size: 3-4 inches long, head to end of tail
average life span: 10+ years with proper care
diet: omnivores

Bird owners should avoid non-stick cookware and appliances as they can release fumes hazardous to your bird’s health.

Note: The information on this Care Sheet is not a substitute for veterinary care. If you need additional information, please refer to the sources on the following page or contact your veterinarian as appropriate.

care sheet

**canary**
**serinus canarius domesticus**

where the healthy pets go

Developed with and approved by a qualified veterinarian.

---

**diet**

A well-balanced canary diet consists of:

- Specialized pellets should make up 60-70% of diet; red-factor canaries need specialized food to maintain color, fresh vegetables and fruit and moderate amounts of fortified seeds.
- Clean, fresh, filtered, chlorine-free water, changed daily.
- Do **not** feed birds avocado, fruit seeds, chocolate, caffeine or alcohol as these can cause serious medical conditions. Avoid sugar and high fat treats.

**housing**

- Canaries acclimate well to average household temperatures, not to exceed 80°F; be cautious of extreme temperature changes. The habitat should be placed off the floor in an area that is well-lit and away from drafts.
- A flight habitat, approximately 18”W x 14”D x 18”H, with metal bars spaced no greater than 3/8” apart, makes a good home for one canary. A flight habitat is strongly recommended. It is best to provide the largest habitat possible.
- Perches should be at least 3” long and 1/4”-1/2” in diameter; a variety of perch sizes to exercise feet and help prevent arthritis is recommended.
- A metal grate over the droppings tray will keep the bird away from droppings; line the droppings tray with habitat paper or appropriate substrate for easier cleaning. To avoid contamination, do not place food or water containers under perches.

**feeding**

Things to remember when feeding your canary:
- Fresh food and water should always be available.
- Vegetables and fruits not eaten within a few hours should be discarded.
- Remember, treats should not exceed 10% of total food intake.

**house male canaries together. Different types of birds should not be housed together.**

**normal behavior**

- Male canaries are known for their singing; females chirp rather than sing.
- They need room to fly in their habitat.
- A male canary kept in a habitat with mirrors may not sing.
- Provide foraging toys, which provide important mental stimulation.

**habitat maintenance**

- Clean and disinfect the habitat and perches regularly; replace substrate or habitat liner weekly or more often as needed.
- Replace perches, dishes, and toys when worn or damaged; rotate new toys into the habitat regularly.
- Ensure that there are no habitat parts or toys with lead, zinc or lead-based paints or galvanized parts as these can cause serious medical issues if ingested by your bird.
- Do not use a lot of cleaning agents around your bird as the fumes can be harmful. It is recommended to use a natural cleaning product.

**grooming & hygiene**

- Provide filtered, chlorine-free, lukewarm water regularly for bathing; remove the water when done. As an alternative, mist the bird with water.
- Nails should be trimmed by a qualified person to prevent injury to the bird.

**signs of a healthy animal**

- Active, alert, and sociable
- Eats and drinks throughout the day
- Dry nares and bright, dry eyes
- Beak, legs and feet normal in appearance
- Clean, dry vent
- Smooth, well-groomed feathers

cockatiel
nymphicus hollandicus

care sheet

Cockatiels are small, crested members of the parrot family. They are known for their mellow nature. Gray is the most common color, but also available in fancy, lutino, and pied color variations.

cockatiel facts:

- average adult size: 11-14 inches long, head to end of tail
- average life span: up to 25 years with proper care
- diet: herbivores

Bird owners should avoid non-stick cookware and appliances as they can release fumes hazardous to your bird's health.

red flags

- beak swelling or accumulations
- fluffed, plucked, or soiled feathers
- sitting on floor of habitat
- wheezing or coughing
- runny or discolored stools
- favoring one foot
- eye or nasal discharge
- red or swollen eyes
- loss of appetite

If you notice any of these signs, please contact your exotic animal veterinarian.

normal behavior

- Single lovebirds bond best with owners, but keep in pairs if you cannot devote enough daily interaction time.
- Love to chew, so ensure plenty of toys to chew on.
- They can be territorial, have a unique chatter and a naturally loud call.
- Provide foraging toys, which provide important mental stimulation.

habitat maintenance

- Clean and disinfect the habitat and perches regularly
- Replace substrate or habitat liner weekly or more often as needed.
- Replace perches, dishes, and toys when worn or damaged; rotate new toys into the habitat regularly.
- Ensure that there are no habitat parts or toys with lead, zinc or lead-based paints or galvanized parts as these can cause serious medical issues if ingested by your bird.
- Do not use a lot of cleaning agents around your bird as the fumes can be harmful. It is recommended to use a natural cleaning product.

grooming & hygiene

- Lovebirds love to take baths, so at least twice weekly provide filtered, chlorine-free, lukewarm water for bathing; remove the water when done. As an alternative, mist the bird with water.
- Clipping flight feathers is not necessary, but when done correctly it can help prevent injury or escape; consult an avian veterinarian on what is best for your bird.
- Nails should be trimmed by a qualified person to prevent injury to the bird.

signs of a healthy animal

- Active, alert, and sociable
- Eats and drinks throughout the day
- Dry nares and bright, dry eyes
- Beak, legs and feet normal in appearance
- Clean, dry vent
- Smooth, well-groomed feathers

diet

A well-balanced lovebird diet consists of:

- Specialized pellets should make up 60-70% of diet, fresh vegetables and fruits and small amounts of fortified seeds
- Clean, fresh, filtered, chlorine-free water, changed daily.
- Do not feed birds avocado, fruit seeds, chocolate, caffeine or alcohol as these can cause serious medical conditions. Avoid sugar and high fat treats.

feeding

Things to remember when feeding your lovebird:

- Fresh food and water should always be available.
- Vegetables and fruits not eaten within a few hours should be discarded.
- Remember, treats should not exceed 10% of total food intake.

housing

- Lovebirds acclimate well to average household temperatures, not to exceed 80°F; be cautious of extreme temperature changes. The habitat should be placed off the floor in an area that is well-lit and away from drafts.
- A habitat approximately 18”W x 18”D x 24”H, with metal bars spaced no greater than 3/8” apart, makes a good home for a pair of lovebirds; a flight habitat is strongly recommended. It is best to provide the largest habitat possible.
- Perches should be at least 4” long and 1/2” in diameter; a variety of perch sizes to exercise feet and help prevent arthritis is recommended.
- A metal grate over the droppings tray will keep the bird away from droppings; line the droppings tray with habitat paper or appropriate substrate for easier cleaning. To avoid contamination, do not place food or water containers under perches.

• Lovebirds can be kept alone to bond with pet parent or in pairs to bond with each other. Different types of birds should not be housed together.
• Birds should be socialized daily by the pet parent.

Things to remember when feeding your lovebird:

- Fresh food and water should always be available.
- Vegetables and fruits not eaten within a few hours should be discarded.
- Remember, treats should not exceed 10% of total food intake.

care sheet

parakeet (budgie)

melopsittacus undulatus

Parakeets, also called budgerigars, are small members of the parrot family. They can become good mimics.

parakeet (budgie) facts:

average adult size: 7 inches long, head to end of tail
average life span: 10 to 20 years with proper care
diet: herbivores

Bird owners should avoid non-stick cookware and appliances as they can release fumes hazardous to your bird’s health.

Note: The information on this Care Sheet is not a substitute for veterinary care. If you need additional information, please refer to the sources on the following page or contact your veterinarian as appropriate.

**care sheet**

**parakeet (budgie)**

*melopsittacus undulatus*

**diet**

A well-balanced parakeet diet consists of:
- Specialized pellets should make up 60-70% of diet, fresh vegetables and fruits and small amounts of fortified seeds
- Clean, fresh, filtered, chlorine-free water, changed daily.
- Do not feed birds avocado, fruit seeds, chocolate, caffeine or alcohol as these can cause serious medical conditions. Avoid sugar and high fat treats.

**feeding**

Things to remember when feeding your parakeet:
- Fresh food and water should always be available.
- Vegetables and fruits not eaten within a few hours should be discarded.
- Remember, treats should not exceed 10% of total food intake.

**housing**

- Parakeets acclimate well to average household temperatures, not to exceed 80°F; be cautious of extreme temperature changes. The habitat should be placed off the floor in an area that is well-lit and away from drafts.
- A habitat approximately 18"W x 18"D x 18"H, with metal bars spaced no greater than 1/2" apart, makes a good home for one parakeets. A flight habitat is strongly recommended. It is best to provide the largest habitat possible.
- Perches should be at least 4" long and 3/8" in diameter; a variety of perch sizes to exercise feet and help prevent arthritis is recommended.
- A metal grate over the droppings tray will keep the bird away from droppings; line the droppings tray with habitat paper or appropriate substrate for easier cleaning. To avoid contamination, do not place food or water containers under perches.
- Parakeets can be kept alone to bond with pet parent or in pairs to bond with each other. Different types of birds should not be housed together.

**normal behavior**

- Parakeets are talkers, but their little voices are sometimes hard to hear.
- Active and need daily time out of their habitats to interact with family.
- Keep in pairs if unable to devote daily interaction time.
- Provide foraging toys, which provide important mental stimulation.

**habitat maintenance**

- Clean and disinfect the habitat and perches regularly; replace substrate or habitat liner weekly or more often as needed.
- Replace perches, dishes, and toys when worn or damaged; rotate new toys into the habitat regularly.
- Ensure that there are no habitat parts or toys with lead, zinc or lead-based paints or galvanized parts as these can cause serious medical issues if ingested by your bird.
- Do not use a lot of cleaning agents around your bird as the fumes can be harmful. It is recommended to use a natural cleaning product.

**grooming & hygiene**

- Provide filtered, chlorine-free, lukewarm water regularly for bathing; remove the water when done. As an alternative, mist the bird with water.
- Clipping flight feathers is not necessary, but when done correctly it can help prevent injury or escape; consult an avian veterinarian on what is best for your bird.
- Nails should be trimmed by a qualified person to prevent injury to the bird.

**signs of a healthy animal**

- Active, alert, and sociable
- Eats and drinks throughout the day
- Dry nares and bright, dry eyes
- Beak, legs and feet normal in appearance
- Smooth, well-groomed feathers

If you notice any of these signs, please contact your exotic animal veterinarian.

**red flags**

- beak swelling or accumulations
- fluffed, plucked, or soiled feathers
- sitting on floor of habitat
- wheezing or coughing
- runny or discolored stools
- favoring one foot
- eye or nasal discharge
- red or swollen eyes
- loss of appetite
- appetite loss, fluffed feathers, nasal discharge, green stool, white deposits on eyes, beak
- bird plucks own feathers; may be due to boredom, poor diet or other illness
- bird picks at itself or habitat
- eye or nasal discharge
- red or swollen eyes
- loss of appetite
- white deposits on eyes, beak, legs, and feet

Speak to an associate about our many private brand items available for the care and happiness of your pet.

Because all birds are potential carriers of infectious diseases, such as Chlamydiosis, always wash your hands before and after handling your bird and/or habitat contents to help prevent the potential spread of diseases. Work with your avian veterinarian on protocols to treat your bird should the bird contract Chlamydiosis.

Pregnant women, children under the age of 5 and people with weakened immune systems should contact their physician before purchasing and/or caring for a bird and should consider not having a bird as a pet. For more information regarding birds and disease, go to the Center for Disease Control at cdc.gov/healthypets/ and petco.com/caresheet.

This care sheet can cover the care needs of other species. See petco.com for more information.

small hookbill
includes caique, myers, pionus, red-shouldered, red-bellied, and senegal parrots

care sheet

Friendly and affectionate birds, each small hookbill has unique personality traits, depending on the species.

small hookbill facts:

- average adult size: 8-12 inches, head to end of tail, depending on species
- average life span: 15-30+ years, depending on species
- diet: herbivores

Bird owners should avoid non-stick cookware and appliances as they can release fumes hazardous to your bird’s health.
